

PROCESSING CENTRE

A single-source connection to robust payment processing services

Setting up an in-house processing centre is not only costly but also extremely time and resource consuming. Venturing into the processing business demands significant investment into both software and hardware systems and requires on-site presence of highly skilled professionals. For those financial institutions and organisations either new to the electronic payment business or planning to widen the range of financial services with minimum investment, Compass Plus offers the services of its own fully certified Processing Centre (MSP and TPP).

The Processing Centre provides a single-source connection to robust payment processing services for financial service organisations, retail chains, ATM deployers, government agencies and other organisations. This service enables companies to rapidly enter the market, build revenues, reduce start-up and running costs and provide a superb service to their customers.

The Processing Centre is one of the largest independent processors in Russia and has Third Party Processor and Member Service Provider status in Visa and MasterCard payment systems respectively. The Processing Centre runs exclusively on advanced, state-of-the-art software products from the TranzWare family and serves over 30 financial institutions from several countries.

The Centre ensures the secure storage of customer data, prompt data interchange and provides financial institution's staff with secure remote access to its resources based on the TranzWare Online FIMI technology (voice authorisation, monitoring, device management, limit management, etc.).

To interact with the Processing Centre customers can use TranzWare CMS - the Compass Plus' in-house developed Back Office system (provided to them on special terms) or any other similar software system by using the Processing Centre's exchange formats.

The Processing Centre is also a registered agent of American Express providing processing services to retailers and therefore, able to offer related services to financial institutions.

Processing Centre Advantages:

- Full or selective outsourcing
- Broad range of services
- Fault-tolerance (for more information [click here](#))
- High-volume scalable processing (millions of cards, thousands of terminal devices)
- High speed transaction processing even at peak loads
- Multi-channel delivery environment
- Support for all card types
- Compliant with all current and future security requirements (including EMV)
- Competitive pricing on all the Processing Centre services
- Substantial discounts on TranzWare products for the Processing Centre customers
- 24/7/365 customer support service
- Support for certification with payment networks

The Processing Centre runs exclusively on Compass Plus products and solutions, therefore offering state-of-the-art functionality and a service which is continually updated in line with industry standards, market demands and changing trends. This provides all Compass Plus customers with a competitive edge and never inhibits business development. In addition, such a business composition allows Compass Plus to offer its customers a choice of payment business running options. A customer can choose to run software solutions in-house, outsource its operations to the Processing Center, or choose a combination of both.

Key Processing Centre Functionalities

Transaction processing (various transaction authorisation and routing methods, including execution of customer-defined algorithms during the authorisation process)
